Quality. Service. Value.®

# Understanding our Infrastructure Improvement Plan

At California Water Service, our highest priority is to provide safe, clean, reliable water. This requires a proactive commitment to infrastructure investment. The California Public Utilities Commission (CPUC) recently approved our 2024 Infrastructure Improvement Plan, which includes rate adjustments as well as \$180,279,574 in planned investments in our Bayshore District.

Reliability Runs Deep

# A few of the major improvements planned for our Bayshore District

## Reliability

Replace  
**84,932**  
feet of aging  
water main

## Safety

Install new  
water treatment  
technology, and  
retrofit tanks for  
seismic stability

## Water supply

Construct new  
**1.5 million-gallon**  
storage tank

## How rates are set

Rate adjustments for 2026-2028 will fund important water infrastructure projects, such as new pipes, treatment facilities, pumps, fire hydrants, and more. Cal Water's rates are set by the CPUC with input from the public, so that rates reflect the current cost of operating and upgrading our water system. Any changes to customer bills as a result of our Infrastructure Improvement Plan are expected to take effect July 1, 2026. The average bill will increase 15 cents per day from current rates.\*

*\*Based on a residential customer with the most common meter size of 5/8" x 3/4" and using the median amount of 4,488 gallons (6 Ccf) of water per month. The standard bill breakdown does not include temporary surcharges or credits.*

## Check out our programs to help you save on your water bill

### Financial assistance programs

- PromisePay payment arrangements
- Low-income Customer Assistance Program discounts
- Payment extensions
- Alternative payment arrangements

### Conservation rebates and programs

- Free Conservation Kit
- Smart Landscape Tune-Up Program
- Lawn-to-Garden rebate
- Toilet rebate
- Clothes washer rebate
- Smart irrigation controller rebate
- Sprinkler nozzle rebate

## Your new CPUC-approved rates for safe, clean, reliable water

Per month	Current	New
5/8" x 3/4" meter	\$31.86	\$34.47
Tier 1 (1-6 Ccf)	\$3.8698	\$4.2083
Tier 2 (7-9 Ccf)	\$15.3988	\$16.8152
Tier 3 (10-13 Ccf)	\$19.2417	\$21.0842
Tier 4 (More than 13 Ccf)	\$28.8490	\$25.2184

Although Cal Water proposed a Low-Use Water Equity Program that would have resulted in lower fixed monthly service charges and placed more of the costs in the higher usage tier rates, the CPUC instead set rates that increased the monthly service charge, offsetting a larger portion of fixed water system costs. These costs include the infrastructure and water quality treatment, testing, and monitoring required to have safe, clean, reliable water at your tap, any time you need it, regardless of when it or how much is used. Conversely, usage tier rate changes are reduced to help balance your bill.

For most residential customers, water usage is calculated through four tiers, with pricing based on how much water you use. Water usage is measured in units called Ccf, or 100 cubic feet increments, or 748 gallons of water.
