Update for Cal Water customers on your water service

Quality. Service. Value.®

Understanding our Infrastructure Improvement Plan

At California Water Service, our highest priority is to provide safe, clean, reliable water. This requires a proactive commitment to infrastructure investment. The California Public Utilities Commission (CPUC) recently approved our 2024 Infrastructure Improvement Plan, which includes rate adjustments as well as \$27,288,853 in planned investments in our Westlake communities.

Reliability Runs Deep

A few of the major improvements planned for Westlake

Reliability

Replace

5,430

feet of aging water main

Safety

Upgrade existing water treatment to deliver safe, clean, drinking water

Water supply

Implement advanced metering infrastructure (AMI) to give customers better data to control their water use and help detect customer-side leaks faster

How rates are set

Rate adjustments for 2026-2028 will fund important water infrastructure projects, such as new pipes, treatment facilities, pumps, fire hydrants, and more. Cal Water's rates are set by the CPUC with input from the public, so that rates reflect the current cost of operating and upgrading our water system. Any changes to customer bills as a result of our Infrastructure Improvement Plan are expected to take effect July 1, 2026. The average bill will increase 65 cents per day from current rates.*

Learn more at calwater.com/iip.

*Based on a residential customer with the most common meter size of 5/8" x 3/4" and using the median amount of 8,976 gallons (12 Ccf) of water per month. The standard bill breakdown does not include temporary surcharges or credits.

Check out our programs to help you save on your water bill

Financial assistance programs

- PromisePay payment arrangements
- Low-income Customer Assistance Program discounts
- Payment extensions
- Alternative payment arrangements

Conservation rebates and programs

- Free Conservation Kit
- Smart Landscape Tune-Up Program
- Lawn-to-Garden rebate
- Toilet rebate
- Clothes washer rebate
- Smart irrigation controller rebate
- Sprinkler nozzle rebate

Your new CPUC-approved rates for safe, clean, reliable water

Per month	Current	New
5/8" x 3/4" meter	\$36.68	\$57.53
Tier 1 (1-6 Ccf)	\$1.8254	\$1.7799
Tier 2 (7-25 Ccf)	\$7.2951	\$7.1075
Tier 3 (26-44 Ccf)	\$9.1182	\$8.8982
Tier 4 (More than 44 Ccf)	\$13.6761	\$10.6674

Although Cal Water proposed a Low-Use Water Equity Program that would have resulted in lower fixed monthly service charges and placed more of the costs in the higher usage tier rates, the CPUC instead set rates that increased the monthly service charge, offsetting a larger portion of fixed water system costs. These costs include the infrastructure and water quality treatment, testing, and monitoring required to have safe, clean, reliable water at your tap, any time you need it, regardless of when it or how much is used. Conversely, usage tier rates are now lower to help balance your bill.

For most residential customers, water usage is calculated through four tiers, with pricing based on how much water you use. Water usage is measured in units called Ccf, or 100 cubic feet increments, or 748 gallons of water. To learn more about our rate structure and understanding your water bill, visit calwater.com/iip.
