

# Delivering Safe, High-Quality Drinking Water to Our Communities

We provide more than **80 billion gallons** of water annually to more than **110 communities** across California

Safe drinking water is delivered to about **2 million residents** through an extensive network of:

**6,500+ miles**  
of water main

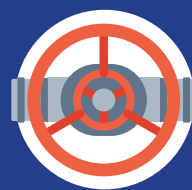

**1,130**  
wells

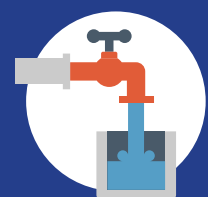

**6**  
surface water  
treatment plants

**660+**  
storage tanks

**155,000+**  
valves

**2,010+**  
sampling stations

**Protecting our customers' health and safety is our highest priority.**

Our rigorous treatment and testing process protects your water from contaminants. We conduct more than **400,000 tests** on **62,000 water samples** for around **300 constituents** per year to ensure our water meets or surpasses all federal and state water quality standards.

Our water quality experts use water testing equipment so sensitive it can detect levels as low as **1 part per trillion**... that's equivalent to detecting one second in 32,000 years!

At Cal Water, in addition to delivering safe water, we are always looking at ways to improve the aesthetic qualities of how your water tastes, looks, and smells.

Quality. Service. Value.®

Reliability Runs Deep
